What did we learn today?

- Map products have different spatial resolutions
- Difference between land-use and land-cover change

- Precision, Recall and F1 score

- Data users and policy makers need this data

- Resolution of a map can cause a different representation of the same geographic region.

- Importance of quantifying the quality – e.g. with F1 score and field data which is considered the truth on the ground

- How to produce these LULC maps
